

Relieve the Tension®

for Wound Closure, Support, and Scar Therapy

BRIJ technologies support you and your patients at every step of the healing journey.

Brijit BP-75

Precision technology designed for smaller, more technical surgical incisions.

- The Brijit BP-75 features a shorter length and curved footpads
- Designed for enhanced precision placement for tighter turns or curved surfaces / incisions
- Ideal for non-linear incisions and areas where there are anatomical constraints, the shortened length ensures optimal device fit even in surface areas with a smaller transverse radius

Brijit BP-100

Powerful technology tailored for a wide range of surgical incisions.

- The Brijit BP-100 features extended length and footpads
- Design tailored to handle most surgical areas as your go-to "workhorse"
- Ideal for more linear incisions and areas where a larger footplate can provide the highest adhesive area/strength

These specialized technologies are designed to complement each other, working together seamlessly during incision closure to effectively relieve the tension and promote optimal healing from the inside out.
